SECURE WITH CONFIDENCE

Develop skills and accelerate cyber readiness

Most security leaders report on organizational security posture to demonstrate return on team training investments. They also have to show they're meeting or exceeding industry standards for cyber readiness. But many find it challenging to track and assess the capabilities of their workforce effectively.

Likewise, security training managers are tasked with building programs to protect the business against cyber attacks. In a dynamic threat environment, training content that quickly addresses security gaps is critical to building cyber readiness—especially with many security teams working under static budgets and talent shortages.

Use SimSpace Workforce Readiness to access real-time training status across individuals.

Leverage the largest available graduate-level training content catalog to create structured training plans for team members.
Workforce Readiness is an add-on to SkillWise, our team assessment and training product that harnesses the power of the SimSpace Cyber Risk Management Platform for realistic cyber range exercises. With Workforce Readiness, you can establish a baseline and drive improvements in your teams' skills and overall effectiveness. Reporting capabilities tailored to specific roles—including executives, teams and individuals—guide smarter spending while helping you mature your security program.

SimSpace provides an integrated environment that combines learning content with hands-on experience and proficiency challenges—delivering quantified assessments of your organization's cyber readiness.
